	<b>Python Module Index</b>	<b>29</b>

Ethereum RPC client library for the [\(PEP 3156\)](#) Python event loop.

The library is intended to provide simple and clear interface to Ethereum node based on *asyncio*.

# CHAPTER 1

---

## Features

---

<i>ujson</i> support	Yes
High-level APIs	Yes
HTTP support	Yes
Unix domain socket (IPC) support	Yes
SSL/TLS support	Yes
Tested CPython versions	3.4, 3.5, 3.6
Tested Geth versions	1.7.0
Implemented RPC apis	<i>db, eth, miner, net, personal, shh, txpool, web3</i>

## CHAPTER 2

---

### Installation

---

The easiest way to install aioethereum is by using the package on PyPi:

```
pip install aioethereum
```

## CHAPTER 3

---

### Requirements

---

- Python 3.3 and *asyncio* or Python 3.4+
- *ujson*

## CHAPTER 4

---

### License

---

The aiothereum is offered under MIT license.

---

### 5.1 Getting started

This part of the documentation is a quick start for writing applications that interact with the client for ethereum nodes (geth, parity, etc.)

#### 5.1.1 Basic API description

This client provides APIs from:

- <https://github.com/ethereum/wiki/wiki/JSON-RPC>
- <https://github.com/ethereum/go-ethereum/wiki/Management-APIs>

It is simple http(s)/unix connector for ethereum node which implements standart RPC methods.

## 6.1 aioethereum API

Documentation related to various APIs available in this package.

### 6.1.1 aioethereum

**class** `aioethereum.AsyncIOHTTPClient` (*host='127.0.0.1', port=8545, tls=False, timeout=60, \*, loop=None*)

Bases: `aioethereum.client.BaseAsyncIOClient`, `aioethereum.management.RpcMixin`

Creates `AsyncIOHTTPClient` client to communicate via HTTP(s).

#### Parameters

- **host** (*str*) – Host on ethereum node
- **port** (*int*) – Port on ethereum node
- **tls** (*bool*) – Use SSL connection
- **timeout** (*int*) – Total time of timeout call
- **loop** (`EventLoop`) – An optional *event loop* instance (uses `asyncio.get_event_loop()` if not specified).

**Returns** `AsyncIOHTTPClient` instance.

**class** `aioethereum.AsyncIOIPCClient` (*reader, writer, unix\_path, timeout=60, \*, loop=None*)

Bases: `aioethereum.client.BaseAsyncIOClient`, `aioethereum.management.RpcMixin`

Creates `AsyncIOIPCClient` client to communicate via IPC.

#### Parameters

- **reader** (`asyncio.streams.StreamReader`) – Instance of the stream reader
- **writer** (`asyncio.streams.StreamWriter`) – Instance of the stream writer

- **unix\_path** (*str*) – Unix domain path
- **timeout** (*int*) – An optional total time of timeout call
- **loop** (EventLoop) – An optional *event loop* instance (uses `asyncio.get_event_loop()` if not specified).

**Returns** *AsyncIOIPCClient* instance.

**class** `aiorethereum.BaseAsyncIOClient`

Bases: `abc.ABC`

Abstract class for creating client.

**rpc\_call** (*method, params=None, id\_=None*)

Implements RPC 2.0 call to node server.

**Parameters**

- **method** (*str*) – RPC node method
- **params** (*list*) – Input params for method
- **id** (*str or int*) – ID of current request

**Returns** *Response from RPC*

**coroutine** `aiorethereum.create_ethereum_client` (*uri, timeout=60, \*, loop=None*)

Create client to ethereum node based on schema.

**Parameters**

- **uri** (*str*) – Host on ethereum node
- **timeout** (*int*) – An optional total time of timeout call
- **loop** (EventLoop) – An optional *event loop* instance (uses `asyncio.get_event_loop()` if not specified).

**Returns** *BaseAsyncIOClient* instance.

## 6.1.2 management

This package contains all high level features of the `aiorethereum.AsyncIOIPCClient` and `aiorethereum.AsyncIOHTTPClient`.

### admin

Admin related features

**class** `aiorethereum.management.admin.AdminMixin`

Bases: `object`

### db

Db related features

**class** `aiorethereum.management.db.DbMixin`

Bases: `object`

**db\_getHex** (*db\_name, key*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#db\\_gethex](https://github.com/ethereum/wiki/wiki/JSON-RPC#db_gethex)

DEPRECATED

**coroutine db\_getString** (*db\_name, key*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#db\\_getstring](https://github.com/ethereum/wiki/wiki/JSON-RPC#db_getstring)

DEPRECATED

**coroutine db\_putHex** (*db\_name, key, value*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#db\\_puthex](https://github.com/ethereum/wiki/wiki/JSON-RPC#db_puthex)

DEPRECATED

**coroutine db\_putString** (*db\_name, key, value*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#db\\_putstring](https://github.com/ethereum/wiki/wiki/JSON-RPC#db_putstring)

DEPRECATED

## debug

Debug related features

**class** aioethereum.management.debug.**DebugMixin**  
 Bases: object

## eth

Eth related features

**class** aioethereum.management.eth.**EthMixin**  
 Bases: object

**coroutine eth\_accounts** ()  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_accounts](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_accounts)

**Returns** accounts

**Return type** list

**coroutine eth\_blockNumber** ()  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_blocknumber](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_blocknumber)

**Returns** bnumber

**Return type** int

**coroutine eth\_call** (*from\_, to=None, gas=None, gas\_price=None, value=None, data=None, block='latest'*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_call](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_call)

### Parameters

- **from** (*str*) – From account address
- **to** (*str*) – To account address (optional)
- **gas** (*int*) – Gas amount for current transaction (optional)
- **gas\_price** (*int*) – Gas price for current transaction (optional)
- **value** (*int*) – Amount of ether to send (optional)

- **data** (*hex*) – Additional data for transaction (optional)
- **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)

**Return type** str

**coroutine eth\_coinbase** ()

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_coinbase](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_coinbase)

**Returns** address

**Return type** str

**coroutine eth\_compileLLL** (*code*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_compilelll](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_compilelll)

DEPRECATED

**coroutine eth\_compileSerpent** (*code*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_compileserpent](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_compileserpent)

DEPRECATED

**coroutine eth\_compileSolidity** (*code*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_compilesolidity](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_compilesolidity)

DEPRECATED

**coroutine eth\_estimateGas** (*from\_*, *to=None*, *gas=None*, *gas\_price=None*, *value=None*,  
*data=None*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_estimategas](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_estimategas)

**Parameters**

- **from** (*str*) – From account address
- **to** (*str*) – To account address (optional)
- **gas** (*int*) – Gas amount for current transaction (optional)
- **gas\_price** (*int*) – Gas price for current transaction (optional)
- **value** (*int*) – Amount of ether to send (optional)
- **data** (*hex*) – Additional data for transaction (optional)

**Returns** gas amount

**Return type** int

**coroutine eth\_gasPrice** ()

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_gasprice](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_gasprice)

**Returns** wei

**Return type** int

**coroutine eth\_getBalance** (*address*, *block='latest'*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getbalance](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getbalance)

**Parameters**

- **address** (*str*) – Account address
- **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)

**Returns** wei

**Return type** int

**coroutine eth\_getBlockByHash** (*bhash*, *tx\_objects=True*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getblockbyhash](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getblockbyhash)

**Parameters**

- **bhash** (*str*) – Block hash
- **tx\_objects** (*bool*) – Return txs full object (optional)

**Returns** block

**Return type** dict or None

**coroutine eth\_getBlockByNumber** (*block='latest'*, *tx\_objects=True*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getblockbynumber](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getblockbynumber)

**Parameters**

- **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)
- **tx\_objects** (*bool*) – Return txs full object (optional)

**Returns** block

**Return type** dict or None

**coroutine eth\_getBlockTransactionCountByHash** (*bhash*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getblocktransactioncountbyhash](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getblocktransactioncountbyhash)

**Parameters** **bhash** (*str*) – Block hash

**Returns** count

**Return type** int or None

**coroutine eth\_getBlockTransactionCountByNumber** (*block='latest'*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getblocktransactioncountbynumber](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getblocktransactioncountbynumber)

**Parameters** **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)

**Returns** count

**Return type** int

**coroutine eth\_getCode** (*address*, *block='latest'*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getcode](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getcode)

**Parameters**

- **address** (*str*) – Address of contract
- **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)

**Returns** code

**Return type** str

**coroutine eth\_getCompilers** ()  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getcompilers](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getcompilers)

DEPRECATED

**coroutine eth\_getFilterChanges** (*filter\_id*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getfilterchanges](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getfilterchanges)

**Parameters** **filter\_id** (*str*) – Id of created filter

**Returns** logs

**Return type** list

**coroutine eth\_getFilterLogs** (*filter\_id*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getfilterlogs](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getfilterlogs)

**Parameters** **filter\_id** (*str*) – Id of created filter

**Returns** logs

**Return type** list

**coroutine eth\_getLogs** (*from\_block='latest', to\_block='latest', address=None, topics=None*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getlogs](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getlogs)

**Parameters**

- **from\_block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)
- **to\_block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)
- **address** (*str*) – Contract address (optional)
- **topics** (*list*) – Topics (optional)

**Returns** logs

**Return type** list

**coroutine eth\_getStorageAt** (*address, position=0, block='latest'*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getstorageat](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getstorageat)

**Parameters**

- **address** (*str*) – Storage address
- **position** (*int*) – Position in storage (optional)
- **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)

**Return type** int

**coroutine eth\_getTransactionByBlockHashAndIndex** (*bhash, index=0*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_gettransactionbyblockhashandindex](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_gettransactionbyblockhashandindex)

**Parameters**

- **bhash** (*str*) – Block hash
- **index** (*int*) – Index position (optional)

**coroutine eth\_getTransactionByBlockNumberAndIndex** (*block='latest', index=0*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_gettransactionbyblocknumberandindex](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_gettransactionbyblocknumberandindex)

**Parameters**

- **block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)
- **index** (*int*) – Index position (optional)

**Returns** transaction

**Return type** dict or None

**coroutine eth\_getTransactionByHash** (*txhash*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_gettransactionbyhash](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_gettransactionbyhash)

**Parameters** **txhash** (*str*) – Transaction hash

**Returns** transaction

**Return type** dict or None

**coroutine eth\_getTransactionCount** (*address*, *block='latest'*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_gettransactioncount](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_gettransactioncount)

**Parameters**

- **address** (*str*) – Account address
- **block** (*int* or *BLOCK\_TAGS*) – Block tag or number (optional)

**Returns** count

**Return type** int

**coroutine eth\_getTransactionReceipt** (*txhash*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_gettransactionreceipt](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_gettransactionreceipt)

**Parameters** **txhash** (*str*) – Transaction hash

**Returns** transaction

**Return type** dict or None

**coroutine eth\_getUncleByBlockHashAndIndex** (*bhash*, *index=0*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getunclebyblockhashandindex](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getunclebyblockhashandindex)

**Parameters**

- **bhash** (*str*) – Block hash
- **index** (*int*) – Index position (optional)

**Returns** block

**Return type** dict or None

**coroutine eth\_getUncleByBlockNumberAndIndex** (*block='latest'*, *index=0*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getunclebyblocknumberandindex](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getunclebyblocknumberandindex)

**Parameters**

- **block** (*int* or *BLOCK\_TAGS*) – Block tag or number (optional)
- **index** (*int*) – Index position (optional)

**Returns** block

**Return type** dict or None

**coroutine eth\_getUncleCountByBlockHash** (*bhash*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getunclecountbyblockhash](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getunclecountbyblockhash)

**Parameters** **bhash** (*str*) – Block hash

**Returns** count

**Return type** int or None

**coroutine eth\_getUncleCountByBlockNumber** (*block='latest'*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getunclecountbyblocknumber](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getunclecountbyblocknumber)

**Parameters** **block** (*int* or *BLOCK\_TAGS*) – Block tag or number (optional)

**Returns** count

**Return type** int

**coroutine eth\_getWork()**

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_getwork](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_getwork)

**Returns** work

**Return type** list

**coroutine eth\_hashrate()**

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_hashrate](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_hashrate)

**Returns** hashrate

**Return type** int

**coroutine eth\_mining()**

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_mining](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_mining)

**Return type** bool

**coroutine eth\_newBlockFilter()**

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_newblockfilter](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_newblockfilter)

**Returns** filter\_id

**Return type** str

**coroutine eth\_newFilter** (*from\_block='latest', to\_block='latest', address=None, topics=None*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_newfilter](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_newfilter)

**Parameters**

- **from\_block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)
- **to\_block** (*int or BLOCK\_TAGS*) – Block tag or number (optional)
- **address** (*str*) – Contract address (optional)
- **topics** (*list*) – Topics (optional)

**Returns** filter\_id

**Return type** str

**coroutine eth\_newPendingTransactionFilter()**

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_newpendingtransactionfilter](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_newpendingtransactionfilter)

**Returns** filter\_id

**Return type** str

**coroutine eth\_protocolVersion()**

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_protocolversion](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_protocolversion)

**Return type** int

**coroutine eth\_sendRawTransaction** (*data*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_sendrawtransaction](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_sendrawtransaction)

**Parameters** **data** (*str*) – Signed transaction data

**Returns** txhash

**Return type** str

**coroutine eth\_sendTransaction** (*from\_, to=None, gas=None, gas\_price=None, value=None, data=None, nonce=None*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_sendtransaction](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_sendtransaction)

**Parameters**

- **from** (*str*) – From account address
- **to** (*str*) – To account address (optional)
- **gas** (*int*) – Gas amount for current transaction (optional)
- **gas\_price** (*int*) – Gas price for current transaction (optional)
- **value** (*int*) – Amount of ether to send (optional)
- **data** (*hex*) – Additional data for transaction (optional)
- **nonce** (*int*) – Unique nonce for transaction (optional)

**Returns** txhash**Return type** str**coroutine eth\_sign** (*address, data*)[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_sign](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_sign)**Parameters**

- **address** (*str*) – Account address
- **data** (*str*) – Message to sign

**Returns** signature**Return type** str**coroutine eth\_submitHashrate** (*hashrate, id\_*)[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_submithashrate](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_submithashrate)**Parameters**

- **hashrate** (*str*) – Hash rate
- **id** (*str*) – Random hex

**Returns** success**Return type** bool**coroutine eth\_submitWork** (*nonce, header, mix\_digest*)[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_submitwork](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_submitwork)**Parameters**

- **nonce** (*int*) – Nonce of work
- **header** (*str*) – Pow-hash header
- **mix\_digest** (*str*) – Mix digest

**Returns** success**Return type** bool**coroutine eth\_syncing** ()[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_syncing](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_syncing)**Returns** sync status or false**Return type** dict or bool**coroutine eth\_uninstallFilter** (*filter\_id*)[https://github.com/ethereum/wiki/wiki/JSON-RPC#eth\\_uninstallfilter](https://github.com/ethereum/wiki/wiki/JSON-RPC#eth_uninstallfilter)

**Parameters** `filter_id` (*str*) – Id of created filter

**Returns** success

**Return type** bool

## miner

Miner related features

**class** `aiorethereum.management.miner.MinerMixin`

Bases: object

**coroutine** `miner_setEtherBase` (*address*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner\\_setetherbase](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner_setetherbase)

NOT AVAILABLE

**coroutine** `miner_setExtra` (*data*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner\\_setextra](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner_setextra)

**Parameters** `data` (*str*) – Extra data a miner can include when miner blocks

**Return type** bool

**coroutine** `miner_setGasPrice` (*number*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner\\_setgasprice](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner_setgasprice)

**Parameters** `number` (*int*) – Minimal accepted gas price when mining transactions

**Return type** bool

**coroutine** `miner_start` (*number*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner\\_start](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner_start)

**Parameters** `number` (*int*) – CPU mining process with the given number of threads

**Return type** None

**coroutine** `miner_stop` ()

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner\\_stop](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#miner_stop)

**Return type** bool

## net

Net related features

**class** `aiorethereum.management.net.NetMixin`

Bases: object

**coroutine** `net_listening` ()

[https://github.com/ethereum/wiki/wiki/JSON-RPC#net\\_listening](https://github.com/ethereum/wiki/wiki/JSON-RPC#net_listening)

**Return type** bool

**coroutine** `net_peerCount` ()

[https://github.com/ethereum/wiki/wiki/JSON-RPC#net\\_peercount](https://github.com/ethereum/wiki/wiki/JSON-RPC#net_peercount)

**Return type** int

**coroutine** `net_version` ()

[https://github.com/ethereum/wiki/wiki/JSON-RPC#net\\_version](https://github.com/ethereum/wiki/wiki/JSON-RPC#net_version)

**Return type** str

## personal

Personal related features

**class** aioethereum.management.personal.**PersonalMixin**

Bases: object

**coroutine** **personal\_ecRecover** (*message, signature*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_ecrecover](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_ecrecover)

**Parameters**

- **message** (*str*) – Message for sign
- **password** (*str*) – Signature of account (optional)

**Returns** address

**Return type** str

**coroutine** **personal\_importRawKey** (*keydata, passphrase*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_importrawkey](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_importrawkey)

**Parameters**

- **keydata** (*str*) – Unencrypted private key
- **passphrase** (*str*) – Passphrase of private key

**Returns** address

**Return type** hex

**coroutine** **personal\_listAccounts** ()

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_listaccounts](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_listaccounts)

**Returns** addresses

**Return type** list

**coroutine** **personal\_lockAccount** (*address*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_lockaccount](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_lockaccount)

**Parameters** **address** (*str*) – Account address

**Return type** bool

**coroutine** **personal\_newAccount** (*passphrase=None*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_newaccount](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_newaccount)

**Parameters** **passphrase** (*str*) – Passphrase of account (optional)

**Returns** address

**Return type** str

**coroutine** **personal\_sendTransaction** (*from\_, to=None, gas=None, gas\_price=None, value=None, data=None, nonce=None, passphrase=None*)

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_sendtransaction](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_sendtransaction)

**Parameters**

- **from** (*str*) – From account address

- **to** (*str*) – To account address (optional)
- **gas** (*int*) – Gas amount for current transaction (optional)
- **gas\_price** (*int*) – Gas price for current transaction (optional)
- **value** (*int*) – Amount of ether to send (optional)
- **data** (*hex*) – Additional data for transaction (optional)
- **nonce** (*int*) – Unique nonce for transaction (optional)
- **passphrase** (*str*) – Passphrase of account (optional)

**Returns** txhash

**Return type** str

**coroutine personal\_sign** (*message, account, password=None*)  
[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_sign](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_sign)

**Parameters**

- **message** (*str*) – Message for sign
- **account** (*str*) – Account address
- **password** (*str*) – Password of account (optional)

**Returns** signature

**Return type** str

**coroutine personal\_unlockAccount** (*address, passphrase=None, duration=None*)  
[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal\\_unlockaccount](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#personal_unlockaccount)

**Parameters**

- **address** (*str*) – Account address
- **passphrase** (*str*) – Passphrase of account (optional)
- **duration** (*int*) – Duration to be unlocked (optional)

**Return type** bool

## shh

Shh related features

**class** aioethereum.management.shh.**ShhMixin**

Bases: object

**coroutine shh\_addToGroup** ()  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#shh\\_addtogroup](https://github.com/ethereum/wiki/wiki/JSON-RPC#shh_addtogroup)

DEPRECATED

**coroutine shh\_getFilterChanges** (*filter\_id*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#shh\\_getfilterchanges](https://github.com/ethereum/wiki/wiki/JSON-RPC#shh_getfilterchanges)

DEPRECATED

**coroutine shh\_getMessages** (*filter\_id*)  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#shh\\_getmessages](https://github.com/ethereum/wiki/wiki/JSON-RPC#shh_getmessages)

DEPRECATED

[https://github.com/ethereum/wiki/wiki/JSON-RPC#shh\\_post](https://github.com/ethereum/wiki/wiki/JSON-RPC#shh_post)

**coroutine** `shh_uninstallFilter` (*filter\_id*)

[https://github.com/ethereum/wiki/wiki/JSON-RPC#shh\\_uninstallfilter](https://github.com/ethereum/wiki/wiki/JSON-RPC#shh_uninstallfilter)

DEPRECATED

**coroutine** `shh_version` ()

[https://github.com/ethereum/wiki/wiki/JSON-RPC#shh\\_version](https://github.com/ethereum/wiki/wiki/JSON-RPC#shh_version)

**Return type** float

## txpool

Txpool related features

**class** `aioethereum.management.txpool.TxpoolMixin`

Bases: object

**coroutine** `txpool_content` ()

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#txpool\\_content](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#txpool_content)

**Return type** dict

**coroutine** `txpool_inspect` ()

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#txpool\\_inspect](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#txpool_inspect)

**Return type** dict

**coroutine** `txpool_status` ()

[https://github.com/ethereum/go-ethereum/wiki/Management-APIs#txpool\\_status](https://github.com/ethereum/go-ethereum/wiki/Management-APIs#txpool_status)

**Return type** dict

## web3

Web3 related features

**class** `aioethereum.management.web3.Web3Mixin`

Bases: object

**coroutine** `web3_clientVersion()`  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#web3\\_clientversion](https://github.com/ethereum/wiki/wiki/JSON-RPC#web3_clientversion)  
**Returns** version  
**Return type** str

**coroutine** `web3_sha3(data)`  
[https://github.com/ethereum/wiki/wiki/JSON-RPC#web3\\_sha3](https://github.com/ethereum/wiki/wiki/JSON-RPC#web3_sha3)  
**Parameters** `data` (*str*) – Data for hashing  
**Returns** Keccak-256  
**Return type** str

## 6.2 Glossary

**asyncio** Reference implementation of **PEP 3156**

See <https://pypi.python.org/pypi/asyncio>

**pytest** A mature full-featured Python testing tool. See <http://pytest.org/latest/>

**ujson** UltraJSON is an ultra fast JSON encoder and decoder written in pure C with bindings for Python 2.5+ and 3.  
ujson.

See <https://pypi.python.org/pypi/ujson>
